

AI Travel Guide - User Guide

1. Overview

AI Travel Guide is a Langflow-based agent that helps users with weather, tourist attractions, hotels, restaurants, shopping, and local transport using live APIs.

2. Prerequisites

Install Langflow, Python 3.12+, and obtain API keys for Geoapify. Internet access is required.

3. Project Components

Main Agent, Weather Tool, Tourist Attractions Tool, Hotel Finder Tool, Restaurant Finder Tool, Shopping Guide Tool, and Local Transport Tool.

4. Importing Flows

Open Langflow, create/import each JSON flow, and save them.

5. Configure APIs

Enter your Geoapify API key in the relevant API Request or Python components. Weather uses Open-Meteo; attractions use Wikipedia.

6. Connect the Main Agent

Add Run Flow tools for each subflow and connect them to the Agent's Tools input. Connect Chat Input -> Agent -> Chat Output.

7. Example Queries

What is the weather in London? Best hotels in Dubai. Best restaurants in Paris. Where should I shop in Tokyo? How can I travel around Singapore?

8. Troubleshooting

Verify API keys, internet connectivity, and tool connections. Check Langflow logs for API errors.

9. Future Enhancements

Add currency conversion, flight information, itinerary planning, emergency services, and multilingual support.
