

AGENTIC AI - WEEK 3

Post-Class Assignment

Feature Prioritization Pipeline

Build a 3-Agent Decision System in LangFlow

Planner → Analyzer → Critic

 Estimated Time 1-2 hours	 Total Points 100 points
 Difficulty Intermediate	 Tools LangFlow + OpenAI API

Assignment Overview

Objective

Build a 3-agent LangFlow pipeline that helps a PM prioritize features for the next quarter. Your pipeline will demonstrate the core multi-agent pattern: specialized agents working together, each with ONE job.

The Challenge

You are a PM at a B2B SaaS company. Customers have requested 5 features, but you only have capacity to build 2 this quarter. Which 2 should you prioritize?

The features:

- Dark Mode (200 requests, 2 weeks)
- PDF Export (50 enterprise requests, 4 weeks)
- Mobile App (500 requests, 12 weeks)
- SSO Integration (30 requests, \$150K deals blocked)
- Dashboard Redesign (100 requests, 4 weeks)

Your constraints:

- 2 engineers available
- 10 weeks in the quarter
- Must ship at least one customer-visible improvement

What You'll Build

Decision Brief → PLANNER → ANALYZER → CRITIC → Critiqued Recommendation

Planner	Breaks down the decision into tasks, identifies missing info, defines criteria. Does NOT recommend.
Analyzer	Makes a recommendation with tradeoffs, risks, and next steps.
Critic	Finds holes, challenges assumptions, gives a verdict (Approve/Revise/Escalate).

Deliverables

1. Screenshot of Your Complete Flow

- Show all 3 agents connected: Planner → Analyzer → Critic
- Agent names must be visible

2. Agent Outputs (Copy-Paste)

- Planner Output
- Analyzer Output
- Critic Output

3. Reflection (3-5 sentences each)

- **Q1:** What did the Critic catch that the Analyzer missed?
- **Q2:** Do you agree with the Critic's verdict? Why or why not?
- **Q3:** If you added a Reviser agent, what would you have it fix?

4. JSON File for complete flow

- Please give anyone can view access and share the google drive link.

Completion Checklist

Criteria	What We're Looking For
Flow Works	All 3 agents connected, pipeline runs end-to-end
Planner Quality	Structured output with tasks, missing info, criteria. Does NOT recommend.
Analyzer Quality	Clear recommendation with explicit tradeoffs and reasoning
Critic Quality	Finds 3+ valid issues, specific not vague, clear verdict
Reflection	Thoughtful answers showing understanding of multi-agent value

★ Bonus Point

Add a Reviser agent that addresses the Critic's feedback and produces an improved recommendation. Show before/after comparison.
